

Mission: DotGreen Foundation promotes awareness and funds programs and projects in all regions of the world dedicated to advancing sustainability.

The DotGreen Foundation engages with a community of donors, corporate partners, and collaborative organizations. This enables support for individuals and green organizations that are committed to addressing environmental and humanitarian imperatives. Through cross sector partnerships and dialogue with communities, businesses, and governments, we can all create a bright and sustainable future.

The DotGreen Foundation is available for projects all around the world, focusing on outreach and education that can have a lasting positive impact for local communities. Regional Foundation Bureaus connect DotGreen with local green efforts of significance.

Donations to DotGreen Foundation

All Foundation projects include a strong community and education component, creating a ripple effect of environmental consciousness and continued support. Successful projects have included restoration of native species in the rich Ward's Island ecosystem in Toronto, Canada, protecting the rainforest and educating visitors through hands-on planting with Rios Tropicales in Costa Rica, and sustainable business awareness and green advocacy with international Internet delegates in Beijing, China.
